

GeoHay

Solutions

Mines and Quarries

Location: North Georgia

Application: Due to the sheer amount of particulate that could be in the runoff of a mine or a quarry, they are under severe scrutiny by many of the regulatory agencies. A mining facility in North Georgia called on GeoHay for its 95% or better removal of the particulate in the water. Product was installed at outfall points in order to keep the rock, dust, and other particulate on the property.

Outcome:
